

# CROP SCOUTING- FIELD CROPS + PROFESSIONAL RECORD KEEPING

With FS PARTNERS Crop Scouting, our eyes are in your field at the important times. We can help to identify economic risk throughout your fields from pests such as weeds, insects, disease and other disorders including nutrient deficiencies, weather or herbicide injuries. These observations are included in a professional report sent to you, the grower, and recorded to track your field's history, along with making future recommendations for your crop. Any issues found are all geo-referenced in your report, and logged for continuous monitoring.

## FS FIELD CROP SERVICES

### BASIC SCOUTING

**WHEAT:** includes 3 walks; **Early spring, tillering;** stand counts and winter survival, weeds, insects & diseases; **Stem extension:** check for weeds, insects, diseases & nutrient deficiencies; **Heading:** check for fungicide timing and any pests.
